# Scan & Pack

- Scan & Pack is an automated solution for scanning garments.
- It makes sure that all the garments are packed according to the PO/DO sheet provided by the buyer.

# Why Scan & Pack

- Scan & Pack is designed to avoid:
  - Country error
  - Color error
  - Size error
  - Quantity error
  - Easy to use
  - User friendly interface

100% error free shipment is possible only if the scanned cartoons are shipped on the genuine route.

# Development Tools

- C#.net
- MS Sql Server

# System Requirements

- More than 2 Ghz Processor
- Minimum RAM 4 GB
- A simple speaker
- Automated Barcode Scanner with usb port
- Windows 7/8/10 Operating System

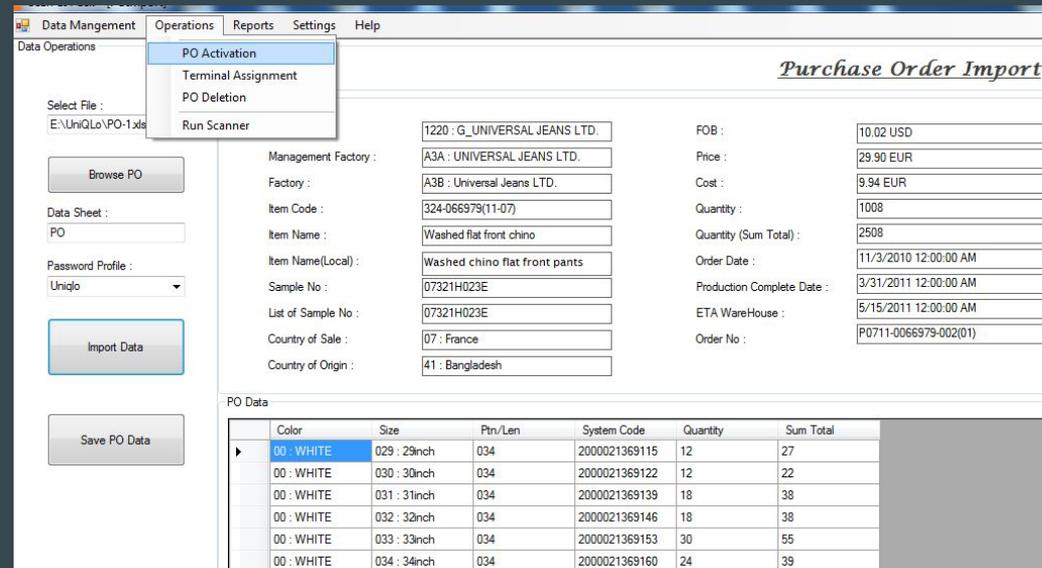

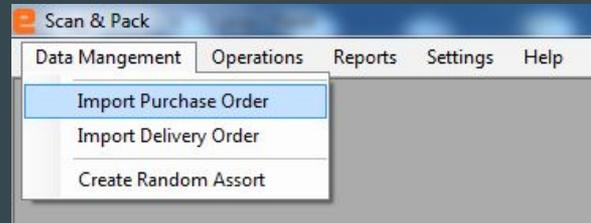

# Installation

- Install the server application
- Create password profile
- Create Users
- Create Terminals
- Manage Role

# How it works

- Two Steps:
  - Import
  - Scan
- Import
  - Import the excel sheets Assign the terminal

# How it works: contd.

- Scan
  - Scan with the barcode scanner
  - Separate sound for correct/error and complete
  - The scanned cartoons will be marked
  - The current cartoon will be highlighted

The screenshot shows a software interface with several panels. On the left, there is a 'PO Number' list with three entries: 'P0111-0069570-001(03)', 'P0111-0069389-001(01)', and 'P0311-0068279-001(01)'. Below this is an 'Assort' dropdown set to 'Solid'. At the bottom left are buttons for 'Get Package(s)' and 'Re-Load PO'. The middle panel shows an 'SKU' field with '08-058-000' and two buttons: 'Run' and 'Recount'. A large red 'Halt' button is at the bottom center. The right panel features a 'Carton Number' list from 1 to 19, with carton 5 selected. To the right of this list are status indicators: 'Active DOID : 14', 'Active Package Type : Solid', 'Carton(s) To be Scanned : 1', 'Active Carton : 2', 'Total Pcs in Carton : 12', and 'Carton Status : Counting...'. Below these are two large display boxes: 'Item Count(s)' showing '12' in green and 'Error Count(s)' showing '1' in red.
